PLUG VALVES

MSI plug valves are used throughout the and gas industry in standard and H2S service environments. Applications for the MSI plug valve include: Blow-out Preventer systems, Snubbing, Cementing, Well Stimulation, Sand separator systems, Gravel Pack applications, Coiled Tubing systems, Production Testing, Flow Back operations and many other applications.

RECENTLY ADDED TO OUR PRODUCT LINE,
THE 3:16 SAFE WEIGHT 2X2 1502 VALVE (UNDER 50LBS)

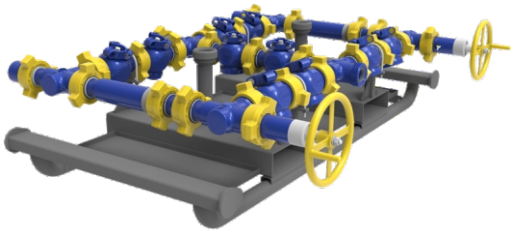

FITTING, ADAPTERS & FLOWLINE

MSI fittings, adapters and flowline are used daily in some of the most severe applications the industry has to offer. Due to our rigid quality and material strength standards our equipment is preferred by those who have to deal with the ever increasingly abrasive environments such as flowback, well control, tree saving, stimulation and other abusive applications.

CHOKES

Invented by MSI in the mid 1980's, the MSI choke is designed to safely control the flow while remaining compact and lightweight. Whether it's an adjustable or positive, STD service or H2S, 3/4" orifice or 2" max, hydraulic or manual, as part of a complete manifold or installed on a sand trap, the MSI choke line is manufactured to assist with your flow control needs.

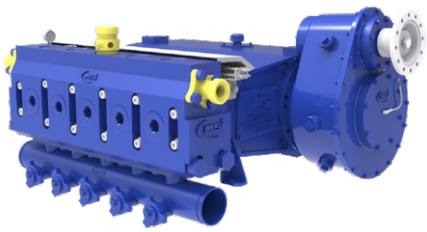

MANIFOLDS

MSI has been at forefront of choke and manifold design. With our ever growing choke and manifold line. We offer unique solutions for the flow control sector of the oil and gas industry. From 1" or 2" cement/stand pipe manifolds to 3" x 4" squeeze/gravel pack manifolds to complete hydraulically operated choke and kill manifolds for H2S or standard service, MSI will work with you to provide the right product for the project.

PUMPS & FLUID ENDS

MSI's well service pump line provides solid performance in the field. Our pump line consists of several models that offer a wide range of capabilities. From our MSI TIH-600 to our MSI QIH-1300, we have a pump that will meet your needs. Our innovative approach to pump design comes from our employees who have over 100 years experience working with pumps and our Engineering department who can model and test new design ideas using the very latest 3D imaging and stress analysis software available.
